

YOUR WORKING PROFILE

Aarav Mehta (Sample)

Lume Lens - a working profile for how you work

Product Manager | Information Technology / Software | Bengaluru | Age 29

USE THIS WITH CONTEXT

This profile is decision intelligence, not a verdict. Use it to make clearer career choices, ask sharper questions, and design work that respects your energy as well as your ambition.

Your strongest personality pattern is conscientiousness, and your motivation is largely autonomous. You default to rational decision-making, collaborating in disagreement, and your strongest emotional intelligence branch is perceiving.

YOUR NEXT STEP

Bring this profile to a 1:1 debrief to turn it into concrete career moves - WhatsApp +91 70156 71280 or hello@lumelive.co.in.

PERSONALITY

Conscientiousness

100/100

DRIVE

Intrinsic

100/100

DECISIONS

Rational

100/100

CONFLICT

Collaborating

75/100

EMOTION

Perceiving

75/100

Openness

Openness

**75 / 100**

High

Conscientiousness

Conscientiousness

**100 / 100**

High

Extraversion

Extraversion

**50 / 100**

Moderate

Agreeableness

Agreeableness

**75 / 100**

High

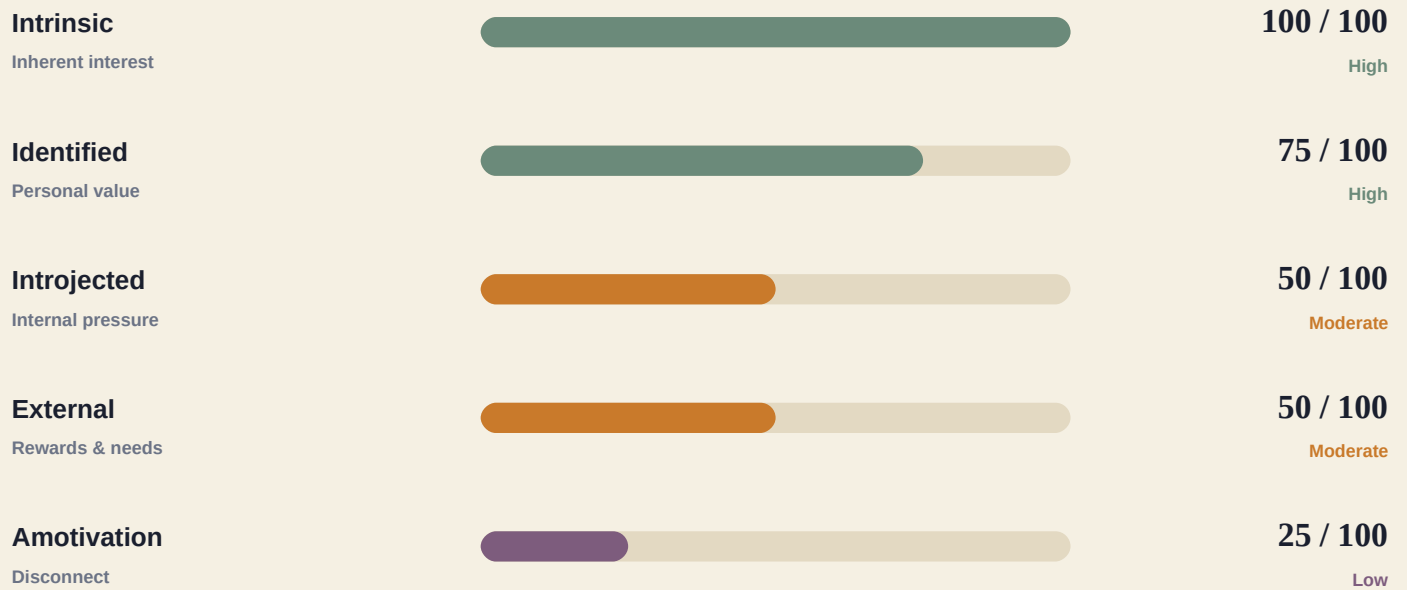

Emotional Stability

Steadiness

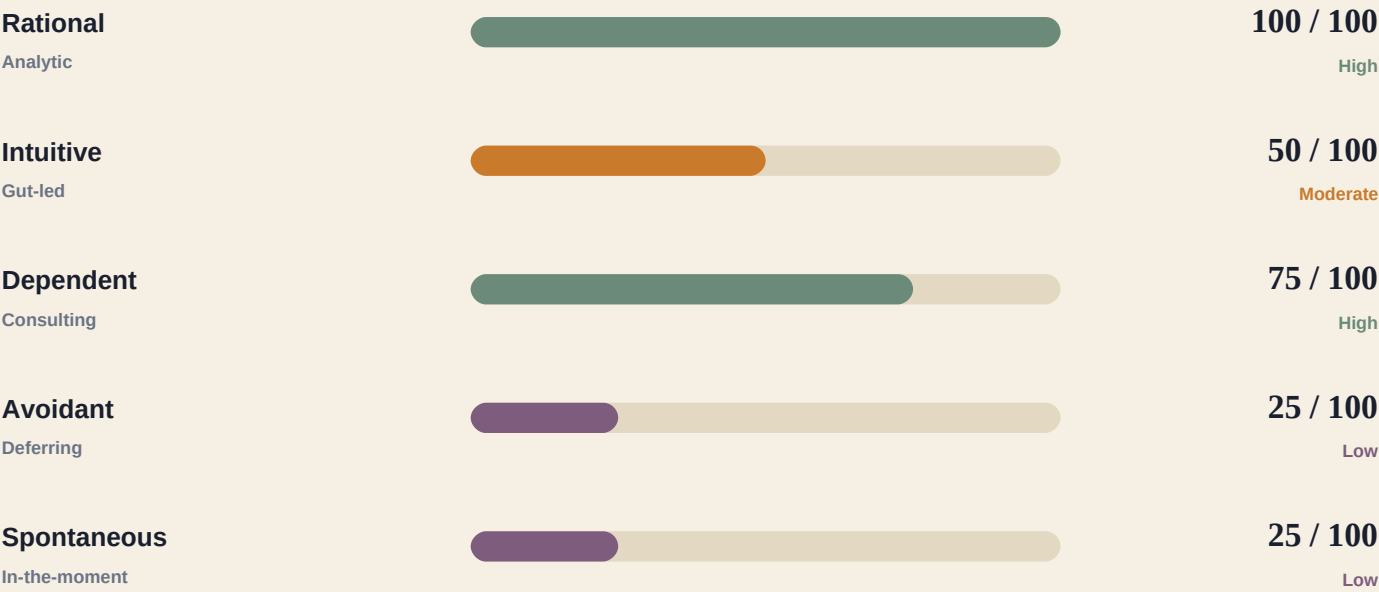

**50 / 100**

Moderate

This part looked at how you typically engage with work and people. A higher score on any dimension is not better than a lower one - only different.

This part looked at where your energy for work actually comes from. Most people work for several reasons at once; one is not better than another.

This part looked at how you typically reach a choice. Style varies by stake; the score shows your most common default.

Collaborating

Both-win

**75 / 100**

High

Competing

Asserting

**50 / 100**

Moderate

Compromising

Meeting halfway

**75 / 100**

High

Accommodating

Yielding

**50 / 100**

Moderate

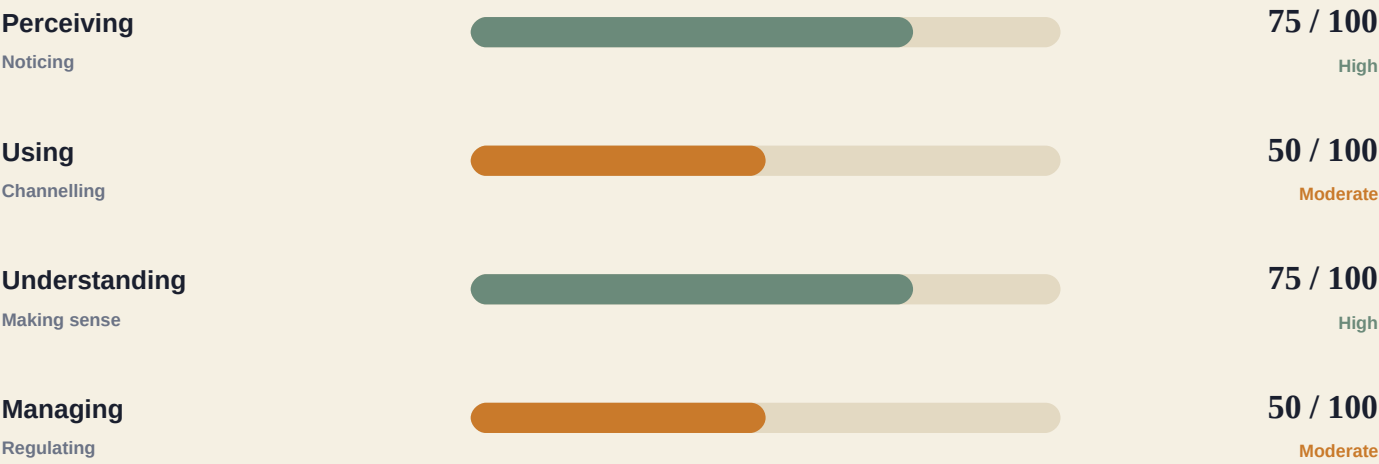

Avoiding

Stepping back

**50 / 100**

Moderate

This part looked at what you do when interests collide. Style shifts with relationship and stakes; this is your most common default.

This part looked at how you read, use, understand, and manage emotion at work. Lower scores point to where the most growth is available.

1. Your Conscientiousness and decision style are reasonably aligned. The pattern to watch is the kind of choice you do not naturally make - not the ones you do.

2. High intrinsic motivation is a load-bearing asset. Protect the conditions that produced it: autonomy, mastery, meaningful problems. Career moves that strip these away tend to look better on paper than they feel a year in.

3. Your conflict default and emotion management set the ceiling on the difficult conversations you can lead. Both can be trained, and they train each other.

-
1. Share two dimensions you were surprised by with someone who knows you well - and ask whether they recognise that pattern in you.
 2. Pick one dimension where your score is at an extreme (very high or very low). Identify one situation in the last month where that tendency helped, and one where it cost you.
 3. If you came to this expecting confirmation of how you see yourself, look hardest at the score that disagrees with you.

Lume Lens uses 119 self-report statements across five short scales. Each scale is built on an established public-domain framework in psychology:

- Personality: the Five Factor Model, measured with markers from the International Personality Item Pool (IPIP).
- Motivation: Self-Determination Theory (Deci & Ryan), distinguishing intrinsic, identified, introjected, and external regulation, plus amotivation.
- Decision-Making: the five-style framework in the general decision-making literature.
- Conflict: dual-concern theory, mapping concern-for-self against concern-for-others into five styles.
- Emotional Intelligence: the four-branch ability model (perceiving, using, understanding, managing emotion).

Scores are on a 0-100 scale, calculated as the mean of items in each dimension (with reverse-keyed items inverted), then linearly rescaled. They are NOT percentiles against a norm group; comparison to a representative population would require a normed sample, which Lume Live is actively building. Treat scores as descriptive, not diagnostic.

Lume Lens is not a substitute for clinical assessment, hiring decisions, performance evaluation, or medical diagnosis. It is intended for private reflection, coaching discussion, and professional development planning.
