WHAT THIS MEANS FOR YOU

Your most pronounced pattern is agreeableness. These are preferences, not fixed traits or a score of how "good" you are. In a counselling conversation we explore how this shapes your study habits, the way you make decisions, and the environments where you feel most yourself.

02

Career Interest Themes (Holland RIASEC)

0 to 7 interest scale

R

Realistic - the Doers

Score 7 / 7

What this means: Practical, hands-on people who are often good at mechanical, technical, athletic or physical work and enjoy working with tools, machines, animals, plants or the outdoors.

In real life: Realistic students often enjoy practical subjects - working in a lab, building or repairing things, sports, or fieldwork - more than long theory lectures. Careers like engineering, defence services, physiotherapy, agriculture, pilot training or skilled technical trades often suit Realistic types who like visible, hands-on results.

YOUR NEXT STEP

Spend one afternoon this week doing something hands-on linked to a subject you like - a small experiment, a repair, a model, or a site visit. Notice how engaged you feel compared to classroom study.

Social - the Helpers

Score 6 / 7

What this means: Warm, supportive people who like to work with and for others - teaching, helping, caring and guiding.

In real life: Social students thrive in team projects and roles with real human interaction - a doctor with patients, a teacher, a psychologist, an HR professional or a social worker. Even technical careers feel more meaningful to Social types when the work clearly helps real people.

YOUR NEXT STEP

Volunteer to explain one difficult topic to a classmate this week. If teaching it energises you, Social interests are likely a core strength worth building on.

Conventional - the Organisers

Score 5 / 7

What this means: Careful, detail-oriented people who like order, structure and working with data, records and clear procedures.

In real life: Conventional students often like clear rules, neat organisation, accuracy and structured work over open-ended ambiguity. Accounting, banking, company secretaryship, data management, administration and law-clerking suit Conventional types who value order and reliability.

YOUR NEXT STEP

Organise one messy part of your study life this week - a clean timetable, a labelled notes folder, or a tracked to-do list. See how satisfying structure feels to you.

03

Career Values & Work Drivers

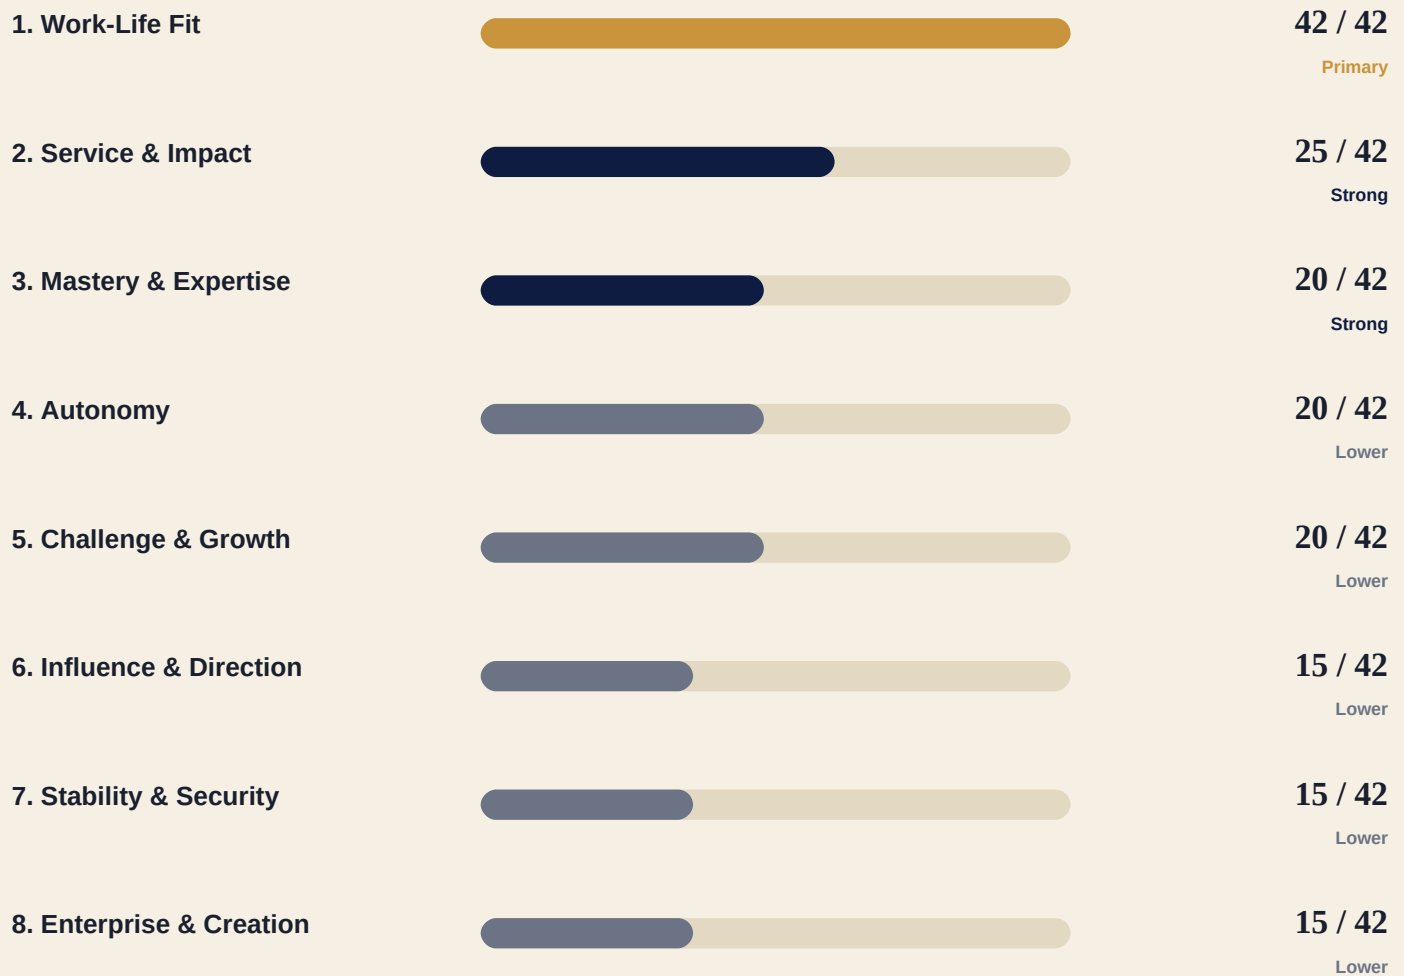

Ranked drivers

Primary Work Driver

Work-Life Fit

You are driven by a sustainable fit between career, health, relationships and personal priorities. Success needs to leave room for the whole person.

YOUR NEXT STEP

When comparing two good options, weigh the lifestyle each really allows - working hours, location and stress - not just the salary or status.

04

Learning Preferences (VARK)

How you absorb information best

STRONGEST PREFERENCE

Hands-On Practice

Learn by doing - solve past papers, build models, or connect each concept to a real example. Practice cements ideas faster than re-reading.

HOW TO STUDY WITH YOUR PROFILE - IN PLAIN WORDS

● Hands-On Practice (Strongest)

Learn by doing - solve past papers, build models, or connect each concept to a real example. Practice cements ideas faster than re-reading.

● Visual Structure

Before each exam, turn the chapter into a mind-map or flow chart. It reveals gaps in your understanding that plain reading hides.

● Spoken Discussion

Explain each topic out loud to a friend or even to yourself. If you can teach it simply, you truly understand it.

● Written Notes

Rewrite your class notes in your own words every evening. This single habit improves both understanding and recall significantly.

Use these lanes as discussion starters, not final stream decisions. The strongest interest themes, Work-Life Fit work driver, agreeableness personality pattern and hands-on practice learning preference should be checked against marks, subject comfort and stress load.

1. Science, technology or health pathways

Discuss PCM, PCB, computer science, research, engineering, health and applied-science routes only after checking subject comfort and workload readiness.

2. Commerce, business or finance pathways

Discuss accountancy, economics, business studies, management, entrepreneurship, finance and data-backed business roles.

3. Humanities, design or people-focused pathways

Discuss psychology, law, design, media, education, social sciences, public policy and communication-heavy careers.

Before locking the stream, discuss

- Which subjects does the student willingly practise even when nobody is watching?
- Which stream keeps two or more realistic career paths open without overloading mental health?
- What would the student still choose if relatives, tuition trends and peer pressure were removed?

This section supports a counselling conversation. It does not automatically assign Science, Commerce, Humanities or any other stream.

A NOTE FROM YOUR COUNSELLOR

Hi Nishant, thank you for completing all four assessments. Reading your responses carefully, I can see a genuine, thoughtful pattern emerging - and that is exactly what makes a good counselling conversation possible. These results are not a label or a limitation. They are a mirror. In our session, we will look at the patterns that surprised you, the ones that felt deeply true, and the ones you are still questioning - and use those to narrow down your next concrete step. Remember: career clarity is rarely a single moment. It is a series of small, honest conversations - and this report is a great foundation for ours.

Sachin Bajaj

Counselling Psychologist - Founder, Lume Live - Rohtak, Haryana

Important note

These results describe your self-reported preferences today. They are a starting point for your counselling conversation, not a psychological diagnosis or selection decision. The four tools are educational self-reflection instruments. Preferences change over time and may not capture all of your personality or abilities. Please discuss these results with a qualified counsellor before any major academic or career decision.
