

YOUR WORKING PROFILE

Aarav Mehta (Sample)

Lume Lens - a working profile for how you work

Product Manager | Information Technology / Software | Bengaluru | Age 29

USE THIS WITH CONTEXT

This profile is decision intelligence, not a verdict. Use it to make clearer career choices, ask sharper questions, and design work that respects your energy as well as your ambition.

Your strongest personality pattern is conscientiousness, and your motivation is largely autonomous. You default to rational decision-making, collaborating in disagreement, and your strongest emotional intelligence branch is perceiving.

YOUR NEXT STEP

Bring this profile to a 1:1 debrief to turn it into concrete career moves - WhatsApp +91 70156 71280 or hello@lumelive.co.in.

WHAT YOUR SCORES MEAN - IN PLAIN WORDS

- **Conscientiousness (High)**
You reliably plan, organise and follow through.
- **Openness (High)**
You are drawn to novelty, ideas and variety; routine can feel constraining.
- **Agreeableness (High)**
You prioritise warmth, cooperation and trust.
- **Extraversion (Moderate)**
You gain energy from people and group interaction.
- **Emotional Stability (Moderate)**
You tend to stay composed under pressure.

REFLECT ON THIS

- Which of these patterns feels most like you at work - and did any of them surprise you?
- Where does your strongest trait help you most, and where might it quietly cost you?

A higher score on any dimension is not better than a lower one - only different. These describe your natural style, not your ability.

WHAT YOUR SCORES MEAN - IN PLAIN WORDS

- **Intrinsic (High)**
You work because the work itself is engaging.
- **Identified (High)**
You work because it aligns with what you value.
- **Introjected (Moderate)**
You work to avoid guilt or to protect self-worth.
- **External (Moderate)**
You work for income, recognition or to avoid consequences.
- **Amotivation (Low)**
You have a clear sense of why you are doing this.

REFLECT ON THIS

- On a hard day, which of these reasons actually keeps you going?
- Is your current role feeding your strongest driver - or slowly starving it?

Most people work for several reasons at once; one is not better than another. The aim is to protect the drivers that keep you energised.

WHAT YOUR SCORES MEAN - IN PLAIN WORDS

- **Rational (High)**
You lead with analysis - weighing evidence, structuring options, projecting consequences.
- **Dependent (High)**
You lead by consulting - trusted others sharpen your thinking.
- **Intuitive (Moderate)**
You lead with intuition - reading patterns faster than you can articulate them.
- **Avoidant (Low)**
You commit to decisions readily rather than defer them.
- **Spontaneous (Low)**
You take your time before committing to a choice.

REFLECT ON THIS

- Think of a recent big decision - did you use your default style, or borrow a different one?
- Which kinds of decisions do you tend to put off or sidestep?

Your style shifts with how much is at stake; the score shows your most common default when you are not thinking about it.

Collaborating

Both-win

**75 / 100**

High

Competing

Asserting

**50 / 100**

Moderate

Compromising

Meeting halfway

**75 / 100**

High

Accommodating

Yielding

**50 / 100**

Moderate

Avoiding

Stepping back

**50 / 100**

Moderate

WHAT YOUR SCORES MEAN - IN PLAIN WORDS

● **Collaborating (High)**

You default to collaboration - seeking outcomes that work for both sides.

● **Compromising (High)**

You default to compromise - splitting the difference to keep moving.

● **Competing (Moderate)**

You default to competing - pushing for your position.

● **Accommodating (Moderate)**

You default to accommodating - conceding to preserve the relationship.

● **Avoiding (Moderate)**

You default to avoiding - stepping back from conflict.

REFLECT ON THIS

- In your last disagreement at work, which move did you reach for first?
- Is there a relationship where a different approach would serve you better?

Your approach changes with the relationship and the stakes; this is simply the move you reach for first.

Perceiving

Noticing

**75 / 100**

High

Using

Channelling

**50 / 100**

Moderate

Understanding

Making sense

**75 / 100**

High

Managing

Regulating

**50 / 100**

Moderate

WHAT YOUR SCORES MEAN - IN PLAIN WORDS

- **Perceiving (High)**
You notice emotion in yourself and others readily.
- **Understanding (High)**
You know what feelings mean and where they come from.
- **Using (Moderate)**
You let emotion inform thinking and action.
- **Managing (Moderate)**
You regulate emotion in yourself and help others do the same.

REFLECT ON THIS

- Which branch - noticing, using, understanding, or managing emotion - is easiest for you, and which is hardest?
- When you are under pressure, what actually helps you steady yourself?

Lower scores are not weaknesses - they simply point to where the most growth is available, and every one of these skills can be learned.

1. Your Conscientiousness and decision style are reasonably aligned. The pattern to watch is the kind of choice you do not naturally make - not the ones you do.

2. High intrinsic motivation is a load-bearing asset. Protect the conditions that produced it: autonomy, mastery, meaningful problems. Career moves that strip these away tend to look better on paper than they feel a year in.

3. Your conflict default and emotion management set the ceiling on the difficult conversations you can lead. Both can be trained, and they train each other.

Where You'll Do Your Best Work

Environments and roles that fit your profile

These are drawn from your own scores - the conditions where this profile tends to thrive. Treat them as a starting point for exploration, not a fixed recommendation.

Autonomy & meaningful problems

You do your best work when you own the problem and the work itself is genuinely interesting.

Variety & room to experiment

Novel challenges and freedom to try new approaches energise you; rigid routine drains you.

Clear ownership & follow-through

You thrive where commitments are clear and you can be trusted to deliver end to end.

Evidence & structured thinking

Roles that reward analysis, structure and well-reasoned decisions suit how you think.

Collaborative, trust-based teams

You are at your best in cooperative teams that solve problems together rather than compete.

Emotionally mature cultures

Teams that handle feeling and conflict well let your people skills compound.

EXAMPLE ROLE TYPES TO EXPLORE

Example directions to explore in your debrief: analysis- and ownership-led roles (product, strategy, operations, data/analytics, consulting); build-and-create roles (design, R&D, early-stage or founding work); people- and partnership-led roles (program/people management, customer success, business development).

Small, specific moves turn a profile into real change. Work through these over the next month.

☐

Share two dimensions that surprised you with someone who knows you well, and ask whether they recognise the pattern in you.

☐

Pick one dimension at an extreme (very high or very low). Note one moment this month it helped you, and one where it cost you.

☐

Choose your lowest emotional-intelligence branch and practise it once this week in a real situation.

☐

Protect one condition that feeds your strongest driver - block focus time, or take on a problem you find genuinely interesting.

☐

Book a 1:1 debrief to turn this profile into two or three specific career moves.

A NOTE FROM YOUR COUNSELLOR

Hi Aarav, thank you for completing Lume Lens. A working profile like this earns its value in conversation - when we connect these patterns to the real decisions in front of you: a role change, a difficult relationship at work, or simply protecting the conditions that keep you doing your best work. These scores are a mirror, not a verdict. If something here resonated - or quietly puzzled you - that is exactly where a debrief helps. Let us turn this into two or three concrete next moves you can actually act on.

Sachin Bajaj

Counselling Psychologist - Founder, Lume Live - Rohtak, Haryana

Lume Lens uses 119 self-report statements across five short scales. Each scale is built on an established public-domain framework in psychology:

- Personality: the Five Factor Model, measured with markers from the International Personality Item Pool (IPIP).
- Motivation: Self-Determination Theory (Deci & Ryan), distinguishing intrinsic, identified, introjected, and external regulation, plus amotivation.
- Decision-Making: the five-style framework in the general decision-making literature.
- Conflict: dual-concern theory, mapping concern-for-self against concern-for-others into five styles.
- Emotional Intelligence: the four-branch ability model (perceiving, using, understanding, managing emotion).

Scores are on a 0-100 scale, calculated as the mean of items in each dimension (with reverse-keyed items inverted), then linearly rescaled. They are NOT percentiles against a norm group; comparison to a representative population would require a normed sample, which Lume Live is actively building. Treat scores as descriptive, not diagnostic.

Lume Lens is not a substitute for clinical assessment, hiring decisions, performance evaluation, or medical diagnosis. It is intended for private reflection, coaching discussion, and professional development planning.
